1824 Oak Creek Dr Apt.205, Palo Alto, CA 94304

## GOAL

---

Looking for Quantitative Researcher Internship in Summer 2018

## EDUCATION

---

### Stanford University

09/2017 - 2022(*expected*)

Ph.D. student in Computational and Mathematical Engineering

Research Interest: quantitative finance, mathematical and statistical modeling for risk management

### Peking University

09/2013 - 07/2017

B.S. in Computational Mathematics - GPA: 3.86/4.00

Relevant Coursework: Theory of Probability, Data Structure and Algorithm, Statistical Machine Learning, Mathematical Modeling, Convex Optimization, Numerical Linear Algebra, Applied Partial Differential Equations

## RELEVANT RESEARCH EXPERIENCE

---

### Data-driven Nonparametric Option Pricing with Shape Constraints

National University of Singapore, advisors: Prof. Zuowei Shen and Prof. Steven Kou

10/2016-present

- used Hilbert basis to approximate option pricing formula with respect to strike and time to maturity, under constraints of monotonically decreasing and convexity in strike
- extended the daily fitting to a time series fitting with integration of stock price
- achieved more accurate estimation and less overfitting on empirical data

### Adaptive Interpolation for Marginal Maximum Likelihood Estimation of Stochastic Volatility Model

Peking University, advisor: Prof. Chenxu Li

03/2017-06/2017

- proposed an adaptive grid selecting algorithm to choose segment points for piecewise cubic polynomial expansion of marginal transition density
- used stationary distribution and uniform approximation precision to determine the range and density of segment points respectively
- based on selected grids, we could successfully find local smooth minimum for marginal maximum loglikelihood estimation

### CT Image Reconstruction by Spatial-Radon Domain Data-Driven Tight Frame Regularization

Peking University, advisor: Prof. Bin Dong

09/2015-01/2016

- developed a CT image reconstruction model which combines the joint sparsity in reconstructed CT image domain and interpolated projection image domain
- learned data-driven tight frames to provide optimal sparse approximations
- wrote a MATLAB package for CT image restoration including wavelet transformation, tight frame learning
- First Author, accepted by SIAM Journal on Imaging Sciences, 9(3), 1063-1083, 2016

## COMPUTATIONAL SKILLS

---

- MATLAB, Python, C, HTML, L<sup>A</sup>T<sub>E</sub>X

## SELECTED HONORS

---

- National Scholarship, Minister of Education, China 10/2016
- Finalist of the 2016 Mathematical Contest in Modeling, COMAP 04/2016
- Qualcomm Global Scholars Award(18 female students in China) 12/2015
